

硅谷 AI 科技创新公司

项目亮点：

- 接触行业前沿的技术和案例，积累 AI 相关实际经验
- 实训项目接触公司核心业务，重点培训
- 提供实训证明，官方推荐信，支持背景调查
- 支持 CPT、OPT

公司介绍：

公司总部位于硅谷，致力于人工智能技术的研发与应用，旨在为全球企业和终端用户提供先进的 AI 解决方案。核心团队由来自劳伦斯利弗莫尔国家实验室、麻省理工学院、斯坦福大学、宾夕法尼亚大学、加州大学洛杉矶分校等知名机构的博士和科学家组成，并在谷歌、微软、英伟达、IBM、摩根大通、摩根士丹利、城堡投资集团等全球领先的科技与金融公司积累了丰富的行业经验。公司还积极参与国际科技交流，与 Grace Hopper、IEEE 等顶级会议及 Linux 基金会、机密计算联盟等开源组织建立合作，共同推动人工智能技术的发展。

公司业务：

公司专注于人工智能模型的开发与部署，同时提供云计算服务，支持企业在数字化转型过程中高效利用 AI 技术。此外，公司还深入开展机器学习研究实验，专注于客户行为分析，结合大数据和深度学习技术，为企业提供精准的数据洞察及可行性建议，助力企业优化决策、提升运营效率，实现业务增长。其服务对象涵盖各类企业、开源组织及终端用户，致力于通过技术创新赋能行业智能化升级。

Our services

AI Chatbot

AI Chatbot customized to potential partner companies. Partner companies cannot rely on the public ChatGPT due to sensitive user data and internal documents.

AI Powered Reading

Our AI-powered platform enhances the reading experience by offering automated summaries, abridged chapter contents, exam questions, chatbot Q&As, etc.

Data Services

We are also developing datasets collection, aggregate, parsing, and analysis services for LLM/Gen AI industry.

AI Powered UI/UX Design

Applying AI to conduct UI/UX Design for products and services.

AI-Powered GSAF

We are building AI-powered Generic Sentiment Analysis Frameworks for businesses better understand users' perspective on their products and help them optimize.

AI Practice

AI Practices and Training, including areas like AI healthcare, etc.

R&D

We conduct research and development for AI products.

AI Job Seeking System

Our AI-powered job-seeking platform assists students, particularly international students, in identifying skill gaps, offering resume editing, and providing interview co-pilot functionalities.

【项目一】 Data Analytics

What You'll Do

- Drive critical solutions for company's business needs by analyzing a variety of data sets.
- Conduct data analysis using SQL, Python, R, Tableau
- Automate data analytics workflows to streamline the process
- Extract insights from the data sets and document the next step plans across technological, digital marketing, and
- financial fields
- Contribute to the development of data analysis models
- Monitor, identify, and analyze changes in customer behaviors to find trends and market opportunities.
- Actively find areas to improve in data analysis techniques and processes.

What You Need to Succeed

- Passion about insights from data, building workflows for decision making, focus on details and data integrity.
- Knowledge of data analysis tools such as Tableau, Power BI or other visualization packages
- Knowledge of Python, SQL, R.
- Being able to work independently to analyze data, generate insights and identify trends
- Quantitative and qualitative skills
- Demonstrated written and verbal communication skills and the ability to explain and document complex
- problems with simpler terms

【项目二】 Investment Strategies / Quantitative Finance & Machine Learning

What You'll Do

- Apply statistical and machine-learning models to implement quantitative and systematic investment strategies including long-only, long-short market neutral, global macro, trend following, event-driven, sector rotation, bottom-up fundamental, among others.
- Extract, filter and analyze financial, macroeconomic, earnings, credit and other data types and models which will be used as input for the investment models.
- Implement portfolio construction and optimization models such as Mean Variance, Risk Parity, Black-Litterman, among others.
- Back-test and evaluate the performance of different machine learning techniques and investment strategies. Perform paper-trading and real-time simulation of systematic strategies.

Skills

- Machine Learning and Data Science
- Time series analysis
- Corporate Finance
- Capability to extract, filter and synchronize structured and unstructured data
- Python, R, or Matlab
- SQL or Hadoop

【项目三】 Risk Management

What You'll Do

- Know about risk management models such as Value at Risk (VaR), market stress and early warning signal indicators, as well as principles of hedging and diversification.
- Learn about various types of financial risk analysis, including credit, market, operational and regulatory risks.
- Extract, filter and analyze financial, macroeconomic, earnings, credit and other data types and models which will be used as input for the risk management models.
- Utilize risk management tools such as historical time series analysis and Monte-Carlo simulation.
- Perform analysis on financial and macroeconomic data to model different risk scenarios and macro-financial shocks, and their impact on financial portfolios.
- Overview of pricing techniques of various financial instruments across equities and fixed-income.
- Implement portfolio construction and optimization models such as Mean Variance, Risk Parity, Black-Litterman, among others, including relevant risk management metrics.

Skills

- Working towards an undergraduate degree in Insurance, Risk Management, Actuarial Mathematics, Finance/Accounting and/or a Business-related subject matter.
- Detail-oriented, quick learner, ability to multi-task.
- Excellent interpersonal skills through written and verbal communication.
- Proficient in Microsoft Office programs (Outlook, Excel, and Word).
- Familiarity with basic Risk management concepts.

【项目四】 Corporate Sustainability and Impact Strategy (ESG / SDGs / CSR)

What You'll Do

- Conduct research on projects related to Corporate Sustainability, ESG and the UN Sustainable Development Goals, and aspects relevant to corporate strategy, impact investing, sustainable finance and reporting.
- Contribute to sustainable finance assignments that relate to how investors allocate capital using an ESG and/or SDG approach.
- Research topics at the intersection of infrastructure projects and sustainability.
- Work on projects that relate to corporate strategy and alignment towards the sustainable development goals.
- Provide support on projects related to capacity building for Governments in Emerging Markets.
- Contribute to write grants applications in the areas of sustainability and AI for Good.
- Collect, filter and interpret data to support corporate goals to reduce energy, water and waste cost, and consumption.
- Work on writing white papers with use cases that showcase the use of sustainability data for corporate strategy, investment and policy.
- This position can be either Technical or Non-Technical. For the Technical version, it will include components of data science.

Skills

- Coursework related to Sustainability and Climate Change concepts.
- Previous experience with Powerpoint, Excel, and Word.
- Familiar with visualization tools such as Tableau.
- Past experience in a corporate or NGO setting.
- Ability to communicate thoughts and technical ideas in clear and concise manner.

【项目五】 Data Science & Machine Learning

What You'll Do

- You will apply cutting edge Machine Learning and Natural Language Processing methods to process the large amount of the data, transform into compatible formats for downstream core business applications such as investment strategies, digital marketing, and distill into insights for company developments.
- You will extract, filter, process, and analyze large amounts of both structured and unstructured data.
- Apply deep learning and reinforcement learning methods to analyze and derive insights by experimenting with a variety of data sources with both structured and unstructured datasets.
- Build data collection workflows including API queries, web scraping, and using existing taxonomies of Natural Language Processing methods.
- Store large-scale time series data using SQL, Spark, Hadoop, NoSQL (Mongodb). Identify areas of improvements including latency and improve.

Skills

- Machine Learning and Data Science
- Predictive modeling techniques
- Ability to extract, filter, process, and analyze structured and unstructured data
- IBM Watson APIs
- Matlab, R, Python
- Tableau or other visualization packages including Matplotlib, Seaborn
- SQL or Hadoop

【项目六】 UX/UI Design & Data-Driven

Dashboards

What You'll Do

- Build data-driven interactive web-based dashboards and applications that help draw insights and make decisions using data across the financial, digital marketing, sustainability and other fields.
- Design graphic user interface elements, and build navigation components that have both functional and appealing features.
- Illustrate user interface design ideas using storyboards, process flows, sketches, wireframes and sitemaps; also develop User Interface mockups and prototypes that illustrate the design functionality.
- Evaluate and compare software platforms for UX/UI design and implementation, as well as benchmark design features and functionality.
- Optimize the data workflow, database latency and responsiveness for web/mobile design and UI/UX best practices for user-centered design (UCD).

Skills

- Knowledge of HTML, CSS, JavaScript
- Familiarity with Plotly, Taipy, Heroku, Python, SQL
- Knowledge of user flows and wireframes
- Experience with UX/UI prototyping
- Data architecture and databases such as SQL
- Optional experience with Sketch, Invision or equivalent
- Demonstrated communication, verbal and written skills, and a team player

【项目七】 Digital Marketing

What You'll Do

- Work on strategic digital marketing initiatives to attract new customers and ensure a positive customer experience.
- Develop the full workflow of digital marketing, ranging from digital product design to SEO, AI-driven generation of content, videos, ads, and measurement of performance across multiple social media platforms.
- Implement data-driven strategy performance metrics across multiple social media and marketing platforms, website traffic reports using Google analytics, among other areas.
- Test various AI and data-driven approaches for various high value areas of the digital marketing lifecycle, including no-code and/or low-code techniques and tools.
- Help design graphic user interface elements for apps and websites, and build navigation components that have both functional and appealing features, and develop user interface mockups and prototypes that illustrate the design functionality.
- Research product features and trends, and evaluate new AI and innovative tools to improve the digital marketing workflow.

Skills

- Degree in Business, Marketing, Analytics or related field.
- Know about digital marketing platforms and web content management systems.
- Experience in marketing analytics and SEO tools, such as Google Analytics and/or others.
- Familiar with CRM platforms and integration with other marketing technologies.
- Optional experience with UX/UI prototyping using Canva, Sketch, HTML and/or other.
- Demonstrated interpersonal, verbal and written communication skills.

【项目八】 Front-End Software Developer

What You'll Do

- Contribute to the development, testing, deployment, and maintaining web-based and data-driven web systems and building interactive visualization tools. You will contribute to new features and support existing features.
- Participate in architecture design including user interface overall layout, individual elements, and navigating flows. You will contribute by documenting workflow charts and developing user interface prototypes that demonstrate the functionalities.
- Write down user interface requirements, build unified modeling language (UML) diagrams to illustrate the logic flow, and create system diagrams to integrate with the logic on the backend.
- Collaborate with backend engineers to integrate the frontend features with backend logic. Keep simplifying and cleaning up APIs to streamline the integration process. Investigate, review, clean up, and modify programs to improve collaboration process and program efficiency.
- Build tools using programming languages such as Python, C/C++, Java, and Javascript to pre-process data, making visualization tools, and user interface on the web frontend.
- Maintain, clean up, and optimize data flows, configuration, reduce latency. Built programs that extend across platforms including desktop, mobile devices, and tablets and test functionality and responsiveness.

Skills

- Bachelor's or master's degree in Computer Science, or other related STEM fields.
- Knowledge of HTML, CSS, Javascript, XML, jQuery, ReactJS.
- Knowledge of user flows and wireframes.
- Knowledge of code versioning tools (Git, SVN).
- Demonstrated communication, verbal and written skills, and a team player.

【项目九】 Back-End/Full Stack Software Engineer

What You'll Do

- Work on development, testing, deployment, and maintaining web-based and data-driven web systems and building interactive visualization tools. You will contribute to new features and support existing features.
- Experiment with potential solutions on RESTful APIs, data storages, and deploy the chosen solutions.
- Identify, investigate, and troubleshoot system problems and come up with ideas to resolve and mitigate for the long term.
- Discuss in the group about the architecture, document the details of the design and workflows of the system, write clean and easy-to-understand programs, and test the programs. You will keep cleaning up the programs to make it easy to maintain and extend to new functionalities.
- Participate in the overall development cycle and help with coding and debugging. You will collaborate with the front-end developers to ensure the functions on the backend are reflected with efficiency on the frontend.
- Implement reusable libraries and logic for long-term use, clean up unused workflows, logic, and configurations.
- Improve overall system latency and improve responsiveness by optimizing the codes.

Skills

- Bachelor's or master's degree in Computer Science, or other related STEM fields.
- Knowledge of web-related skills such as HTML, CSS, Javascript, XML, jQuery.
- Knowledge of code versioning tools (Git, SVN).
- Knowledge of one or more programming languages such as Java, Python, or C++.
- Knowledge of database skills such as SQL, Spark, and/or MongoDB.
- Demonstrated communication, verbal and written skills, and a team player.
